

**Thin Turf? Grow-Ins? Fast Greens? Problem Turf?
Not a Problem with Nutra-Sorb!**

There is a Nutra-Sorb formula suited for any demanding turf nutritional requirement. Formula choices allow you to tank-mix and customize your own nutritional program to suit individual turf nutritional needs.

Most Nutra-Sorb products contain a Stimulant for added value and performance.

Nutra-Sorb 12-0-12 provides an even balance of nitrogen and potassium. Slow release nitrogen is from Triazone and the potassium is derived from potassium Acetate.

Nutra-Sorb 25-0-0 for the times when turf needs extra nitrogen in a safe, slow release form from Triazone. Great for grow-ins and thin areas.

Nutra-Sorb K-PRIME 0-0-25 is the ideal liquid potassium made from potassium Acetate, a safer choice than caustic potassium hydroxide or potassium carbonate and having far greater K uptake.

Nutra-Sorb 18-3-4 + Iron 1.0% iron chelate included in the formula for efficient foliar feeding.

Jump Start 8-30-4 greatly increases seedling vigor, turf establishment during grow-ins, or reclaiming thin areas. Spring applications get turf off to a fast start.

Directions				
For best results apply Nutra-Sorb as a foliar spray in the morning or late evening. Mow anytime after the first irrigation. Apply with 1-2 gallons of water per 1000 square feet.				
Product	Oz. per 10000 sq. ft.
